Ready for a challenge? HADACA- Health Data Challenge

Develop clinical datasets

PUBLIC HEALTH ISSUE
Quantification of cell heterogeneity in cancer

Challenge: Generate experimentally the dataset starting kit.

Methodology for analysis: The goal is to explore various statistical methods for source separation/deconvolution analysis (Non-negative Matrix Factorization, Surrogate Variable Analysis, Principal component Analysis, Latent Factor Models, ...).

Spring 2019: preparation, team building!

Fall 2019 (November): the competition in Grenoble Alpes, France!
