

Looking for a master project?

Interested in fish ecology and management?

We have several projects focusing on European eel!

How?

We have several datasets, some including more than 120 years of data, which can be used to study various aspects regarding the life-history of European eel. There will also be opportunities to assist in lab work and field activities, such as tagging, fyke-net fishing, dissections.

- Growth, survival, and age at maturation in various waterbodies
- Distribution and migration patterns in the Baltic Sea
- Evaluation of management activities such as re-stocking and fishing regulations
- Behavioral and physiological studies

Why?

The European eel is classified as Critically Endangered by the IUCN red list as their recruitment have decline by 90-95%. Current management efforts aim to reverse this negative development. There are many knowledge gaps regarding the ecology and behavior of the European eel that would aid this work. We hope you will help us filling these knowledge gaps!

Location

SLU-Aqua in Ultuna, Drottningholm (Stockholm) or Öregrund
