Research and Development (R&D) Graduate programme – Bioscience – Sweden

Location: Gothenburg, Sweden

Be empowered to be innovative and creative where difference is valued

If you have a Bioscience/Life science based bachelor's or master's degree and a desire to explore your scientific potential within a global biopharmaceutical organisation, our **Bioscience Research and Development (R&D) Graduate Programme** could be the perfect start to your career. You'll gain invaluable insight, exposure and opportunities across our diverse, Research and Development organisation. We'll accelerate your learning and help you achieve your potential as a research scientist.

About AstraZeneca

AstraZeneca is a global, science-led, patient-focused biopharmaceutical company that focuses on the discovery, development and commercialisation of prescription medicines for some of the world's most serious diseases.

We are a company that genuinely follows the science and values individuals at all levels, you'll be backed and encouraged to speak up, ask questions, and share ideas to push the boundaries of science and continuously learn and explore.

At AstraZeneca, we unlock the power of what science can do by empowering you to explore, everyday we work towards our ultimate aim – treating, preventing, modifying and even curing complex diseases.

What is the Bioscience R&D Graduate programme?

Starting in September 2023, the programme lasts two years, consisting of three individual eight month placements. Each placement will provide you with fantastic insights in to drug discovery and development and the opportunity to expand your knowledge of our therapy areas.

The programme's variety and flexibility provides you with unique exposure to expand your knowledge, skills and interest in Bioscience research and other scientific disciplines, research areas and stages of the drug discovery process. As well as helping you broaden your scientific knowledge, we'll help you develop 'soft' skills required to fulfil your career potential.

You will gain an invaluable blend of on-the-job experience and training. You'll enjoy guidance and advice from a huge support network, including a mentor and dedicated programme management team . We'll also encourage you to identify and build collaborative relationships with specialists and leaders across our organisation, and our external networks including leading academic and biotech research institutions. Together, we'll help accelerate your development and knowledge!

Applicants who are applying to our Bioscience programme should have a knowledge of the biology, biochemistry and pharmacology applied in drug discovery. They should have passion for research as well as an understanding of the techniques used to identify and validate new targets, assessing the efficacy and safety of compounds and progressing these towards the clinic. You will have a wide variety of placements to choose from which will allow you to hone your current skills as well as develop new ones.

The majority of placements are wet lab based, although there will also be opportunities to gain experience outside of the lab with computations/bioinformatics projects, working with our early clinical teams or regulatory affairs. It is expected that candidate complete at least one lab based placement related to their discipline during the course of the programme.

The variety of placements on offer is wide and will vary by the site you are applying to and the departments and therapy areas which are based there. You will be based at the site of application throughout the duration of the 2 years, we do not offer international placements on this programme.

Essential for the role

- A 2:1 (UK) / GPA 3 (US) / VG Grade (Sweden) or local equivalent Bachelor's degree, or a Master's level qualification, in any life science or chemistry related subject awarded in 2022 or due to be awarded before September 2023.
- Passionate about working in drug discovery, and committed to helping to push the boundaries of science to deliver life changing medicines to patients.
- Proactive problem solving and critical thinking skills.
- Planning, organisational and time management skills.
- Collaborative, with a partnership approach to achieving success.

Together, we push the boundaries of science to deliver life-changing medicines to patients around the world!
