

SciFest[®]

vetenskapsfestivalen

Hej everyone,

As some of you might remember, there will be a SciFest in September (21st to 23rd of September) <https://www.scifest.se/>, where researchers get the possibility to present their work to school classes and the general public. Doreen Schwochow (SLU) and I are going to have an experimental booth together called "Evolution in a nutshell", where we will use pedagogical activities to illustrate evolution, natural and artificial selection and extract DNA from strawberries.

We are looking for another person (**preferably Swedish speaking**) to help us with the presentations and activities. We specially need someone available on Thursday, September 21st from 10am -4 pm at Fyrishof (lunch break and lunch included), though if you are available Friday (22nd) and Saturday (23rd) that would also be welcome. We have organized everything, so you would only need a bit of an introduction to what we are going to do but you would not have to prepare anything.

Please help us to bring some science and research to the new generation! It is a lot of fun to directly engage about our interesting work and background. Don't hesitate to contact us if you have any questions.

Best,
Mafalda and Doreen
