Title (English) <b>A tool for graphical visualisation and analysis of genomic sequences</b>		
Title (Swedish)		
Abstract <p>A graphical tool for the visualisation and analysis of genomic sequence data has been implemented using object-oriented modelling and Java. In a user-friendly interface, a set of sub-sequences is aligned to a known reference sequence in EMBL-format. The features of the EMBL-entry are displayed and it is possible to extract specific regions from the subset in well-established file-formats for further analysis.</p>		
Keywords <p>Evolutionary analysis, visualisation, object-oriented modelling, CORBA</p>
