Title (English) Preparative plasmid purification by means of triple helix hybridisation		
Title (Swedish)		
Abstract <p>A method for plasmid purification built on triple helix formation was developed. The project was divided into two parts. The first part involved evaluation of an already existing method and testing its yield capacity and stability. The second part involved modifying the method by using other materials in order to scale up the purification process while keeping the costs low.</p>		
Keywords <p>Triple helix, magnetic beads, polystyrene beads, pluronic, PDS, biotin, thiol</p>
