

Health Innovation - An Interdisciplinary Approach 2019

This is the course for you with interest in learning about health innovations and how your knowledge, skills and ideas can improve and develop health care!

The course targets students, PhD students and professionals from different disciplines and educational programmes. The interdisciplinarity is important for the course and for the outcomes! The course will run once a week in late afternoons from February until May 2019 consisting of lectures and workshops.

The course will be divided in three parts:

- **The innovative group:** foundations of innovations, group dynamics, leadership and design thinking to create ideas.
- **The innovative society:** history of health innovations, evaluation of innovations, implementation of innovations and the legal challenges of innovations.
- **The innovative organization:** funding of innovations, protection of innovations, examples of successful innovations and pitching your idea.
