Moltools is currently looking for thesis students

https://igp.uu.se/research/molecular_tools/

We are a research group developing ultra-sensitive and precise nucleic acid and protein detection methods and how to apply these high-performance molecular methods in medical and biological research.

We are now looking for thesis students to participate in the development of such methods and how to apply them in specific applications.

Requirements:
- Studies at Master’s level in Molecular Biology, Biochemistry, Biotechnology.
- Genuine interest in your field
- Ability to work independently in a problem driven environment.
- Excellent oral and written communications skills in English.

What we offer:
- You will learn and utilize basic and advanced molecular biology techniques.
- An innovative research environment with creative ideas and interesting applications.
