Student Project in Bio-Analytical Tools Development [x-jobb]

Research & Development-Pixelgen HQ (Colibri Ventures)

Groundbreaking bio-analytical tools can revolutionize our understanding of health and disease. At Pixelgen Technologies we develop novel analytical methods and products capable of seeing the inner workings of life and deliver these to researchers and drug developers. These products help our clients gain new insights in biomedicine and ultimately improve health.

Your Project

You will work developing and optimizing our product protocols using several tools of molecular biology such as PCR, gel-chromatography, DNA-sequencing, bioinformatics, etc. The work will be hands-on laboratory work on our multi-omics technology.

We are looking for highly ambitious individuals with an analytical and engineering mind-set and with some experience in laboratory work. You will be working with very experienced technology developers in the life sciences field and the project can be started immediately.
